

PRODUCT DESCRIPTION

Stonchem 830 is a highly cross-linked, vinyl ester lining system applied on horizontal surfaces at thicknesses of 60 mil/1.5 mm, or at 125 mil/3 mm. The sequencing of mineral-broadcasted vinyl ester basecoat followed by vinyl ester sealer produces a composite-wear surface that provides a heavy-duty barrier against chemical attack and abrasion. The Stonchem 830 system has excellent resistance to a broad range of acids, alkalies and solvents, including superior resistance to strong organics and moderate resistance to a wide range of inorganic acids.

USES, APPLICATIONS

- Drum storage
- Chemical processing
- Chemical storage rooms
- Secondary containment

PRODUCT ADVANTAGES

- Excellent chemical resistance to a broad range of acids, bases, and solvents
- Mineral composite topcoat for increased impermeability
- Factory proportioned units for easy application

CHEMICAL RESISTANCE

Stonchem 830 is formulated to resist a variety of chemical solutions. Refer to the Stonchem 800 Series Chemical Resistance Guide for lists of reagent concentration and temperature recommendations.

PACKAGING

Stonchem 830 is packaged in units for easy handling. Each unit consists of:

Stonchem 800 Series Broadcast – 60 mil

5 cartons of resin

A carton contains:
2 cans of Resin

5 cartons of Peroxide (800 BRDCST-BPO)

A carton contains:
2 jars of Peroxide

9 bags of broadcast aggregate

Stonchem 800 Series Broadcast – 125 mil

5 cartons of resin

A carton contains :
2 cans of Resin

5 cartons of peroxide (800 BRDCST-BPO)

A carton contains :
2 jars Peroxide

7 bags of broadcast aggregate

COVERAGE

Stonchem 830 at 60 mil/1.5 mm will cover 400 sq. ft./ 37.2 sq. m per unit. Stonchem 830 at 125 mil/3 mm will cover 245 sq. ft./22.7 sq. m per unit.

Note: Coverage rates shown are theoretical. Actual coverage rates may vary. Make necessary allowances for the condition of the surface to be coated, working conditions, waste, spillage, experience level and skill of the installers, etc.

STORAGE CONDITIONS

Store all components between 50 to 75°F/10 to 24°C in a dry area. Keep out of direct sunlight. Avoid excessive heat and do not freeze. The shelf life is 3 months in the original, unopened container.

PHYSICAL CHARACTERISTICS

Compressive Strength.....	17,500 psi
(ASTM C-579)	
Tensile Strength.....	5,800 psi
(ASTM D-638)	
Flexural Strength.....	8,200 psi
(ASTM C-580)	
Flexural Modulus of Elasticity	10 x 10 ⁶ psi
(ASTM C-580)	
Hardness.....	80
(ASTM D-2240, Shore D)	
Abrasion Resistance	0.049 gm max. weight loss
(ASTM D-4080, CS-17)	
Thermal Coefficient	
of Linear Expansion	2.0 x10 ⁻⁵ in./in°F
(ASTM C-531)	
Color.....	Gray

Note: The above physical properties were measured in accordance with the referenced standards. Samples of the actual system, including binder and filler, were used as test specimens.

SUBSTRATE PREPARATION

General

Proper preparation is critical to ensure an adequate bond. The substrate must be dry and free of all wax, grease, oils, fats, soil, loose or foreign materials and laitance. Laitance and unbonded cement particles must be removed by mechanical methods, i.e., abrasive blasting or scarifying. Other contaminants may be removed by scrubbing with a heavy-duty industrial detergent and rinsing with clean water. For recommendations or additional information regarding substrate preparation, contact Stonhard's Technical Service Department.

APPLICATION GUIDELINES

Before mixing and applying any material, make sure environmental conditions are satisfactory for application. For optimal working conditions, the substrate temperature must be between 60 and 80°F/ 15 to 27°C. Measure the surface temperature with a surface thermometer. Cold areas must be heated until the slab temperature is above 50°F/10°C. This will allow the material to achieve a proper cure. Also, a cold substrate will make the material stiff and difficult to apply. Warm areas or areas in direct sunlight must be shaded or arrangements made to work during evenings or at night. A warm substrate (60 to 80°F/15 to 27°C) will aid in the material's workability; however, a hot substrate (90 to 100°F/32 to 37°C) or a substrate directly in the sun will shorten the material's working time and can cause other phenomenon such as pinholing and bubbling.

Substrate temperature should be greater than 5°F/3°C above dew point.

APPLYING

Priming

All surfaces to which Stonchem 830 will be applied must be primed. Use only Stonchem 800 Series Primer. Mix and apply Stonchem 800 Series Primer in accordance with the corresponding product data sheet. Avoid puddling. Allow the primer to cure.

Stonchem 830 – 60 mil system

- Mix peroxide and resin components of Stonchem 830 thoroughly. A drill and Jiffy Mixer are recommended.
- Apply a 25 mil/.63 mm basecoat of Stonchem 830 liquids by roller or squeegee, making sure that proper coverage is obtained.
- While wet, immediately broadcast the aggregate. Do not allow the aggregate to be broadcast ahead of the applicator. Broadcast the aggregate until a dry layer is achieved. Allow the layer to cure. Remove the excess aggregate.

Note: When broadcasting in a large or congested area, it may be desirable for workers to wear spiked shoes (e.g., golf shoes) to enable them to walk out onto the coating without disturbing it.

Apply a 15 mil/375-micron topcoat to the surface or apply enough material to achieve the desired non-skid surface.

Stonchem 830 – 125 mil system

Mix peroxide and resin components of Stonchem 830 thoroughly. A drill and Jiffy Mixer are recommended.

Apply a 50 mil/1.25 mm basecoat of Stonchem 830 liquids by roller or squeegee, making sure that proper coverage is obtained.

While wet, immediately broadcast the aggregate. Do not allow the aggregate to be broadcast ahead of the applicator. Broadcast the aggregate until a dry layer is achieved. Allow the layer to cure. Remove the excess aggregate.

Note: When broadcasting in a large or congested area, it may be desirable for workers to wear spiked shoes (e.g., golf shoes) to enable them to walk out onto the coating without disturbing it.

Apply a 15 mil/375-micron topcoat to the surface, or apply enough material to achieve the desired non-skid surface.

CURING

The surface of Stonchem 830 will be tack-free in 4 to 6 hours at 70°F/21°C. The coated area may be put back into service in 24 hours at 70°F/21°C. Ultimate physical characteristics will be achieved in 7 days.

RECOMMENDATIONS

- Apply only on clean, sound, dry and properly prepared substrates.
- Minimum ambient and surface temperature is 55°F/13°C at the time of application.
- Maximum surface temperature should not exceed 90°F/32°C during application. Substrate temperatures above 100°F/38°C will drastically affect the working time of the product.
- Substrate temperature should be greater than 5°F/3°C above dew point.
- Material should not be applied if humidity is above 85%.
- Application and curing times are dependent upon ambient and surface conditions. Consult Stonhard's Technical Service Department if conditions are not within recommended guidelines.

PRECAUTIONS

- Toluene or Xylene solvents are recommended for clean-up of Stonchem 830 resin (vinyl ester resin and styrene monomer) and peroxide (catalyst/organic peroxide) material spills. Use these materials only in strict accordance with the manufacturers' recommended safety procedures. Dispose of waste materials in accordance with government regulations.
- Avoid contact with Stonchem 830 resin (vinyl ester resin and styrene monomer) and peroxide (catalyst/organic peroxide), as they may cause skin, respiratory and eye irritation.
- The use of NIOSH-approved respirators using an organic vapor/acid gas cartridge is mandatory.
- The selection of proper protective clothing and equipment will significantly reduce the risk of injury. Body covering apparel, safety goggles and impermeable nitrile gloves are highly recommended.

- In the event of accidental eye contact, rinse eyes immediately with copious amounts of water and seek medical attention.
- If material is ingested, immediately contact a physician and reference SDS.
- Use only with adequate ventilation. Inhalation of vapors may cause severe headaches, nausea, and possibly unconsciousness.

NOTES

- Safety Data Sheets for Stonchem 830 are available online at www.stonhard.com under Tech Info or upon request.
- Specific information regarding chemical resistance of Stonchem 830 is available in the Stonchem 800 Series Chemical Resistance Guide.
- A staff of technical service engineers is available to assist with product application or to answer questions related to Stonhard products.
- Requests for technical literature or service can be made through local sales representatives and offices, or corporate offices located worldwide.
